

BodieHills — the funnel FORKS at stage 5 and rejoins at stage 12

pairing consumes the in-window set (1,850), never the QC-passed set (1,717) — those two numbers are on different branches

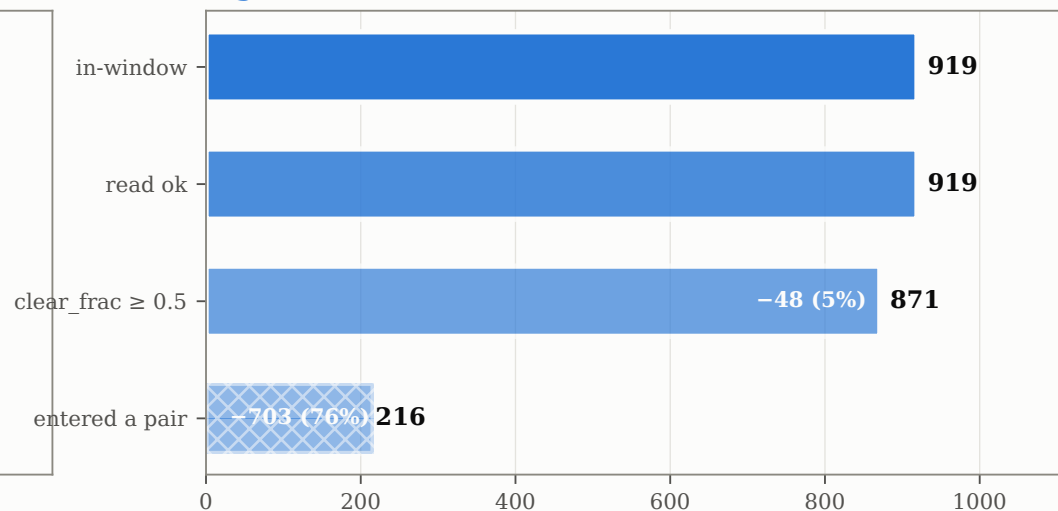

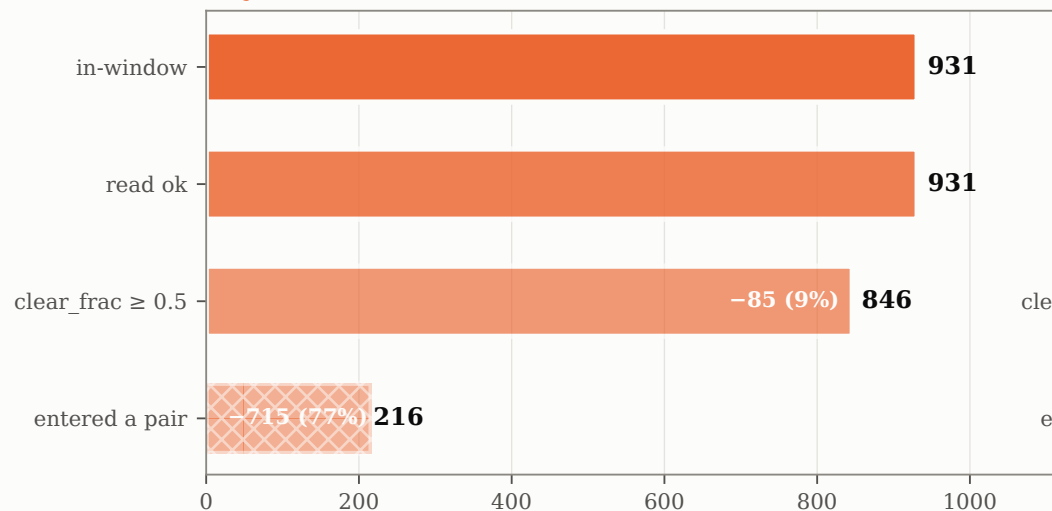

trunk — stages 1-5, every granule together

hatched = aggregate only, the dropped URs were never retained

day lane

night lane

cross-hatched = DERIVED; census_ecostress.py:625 drops unpaired passes with a bare `continue`, recording neither a row nor a counter
